An issued record preserves submitted information. It is not a grade or proof of comprehension.

What do you understand about the work and finish line?

From what I understand, my job is to complete my Week 12 project using Visual Studio and GitHub. Since I am working solo, I am responsible for organizing my work, making changes, testing everything, and keeping track of my progress. I need to make sure my project works correctly and that I save and commit my changes to GitHub. The finish line for me is having a completed project that meets the assignment requirements, works properly, and can be accessed by my professor. I also want to make sure I have proof of my work through my GitHub commits.

What will you contribute? Name a task or useful capability.

Since I am working solo, I bring my creativity, determination, and the programming skills I have learned so far in CS110. I can contribute by writing code, testing my project, fixing errors, and keeping everything organized in Visual Studio and GitHub. One of my strengths is that I don't give up easily when something doesn't work. I try to figure out what went wrong and learn from my mistakes. My main contribution will be making sure my project is completed, works correctly, and meets the assignment requirements.

What needs research, support or practice?

I still need to improve my programming skills, especially when working on more complicated projects in Visual Studio. I want to get better at understanding code, fixing errors, and learning new ways to make my projects work more efficiently. I also want to learn more about game development using Unity and C#. I want to improve my problem-solving skills and become more independent when working on bigger projects. I plan to keep practicing and researching anything I don't understand.

Your available work times and preferred contact method: Discord, email, text, classroom or other. Keep private addresses/numbers outside public exports.

Preferred contact: Discord

Contact on Discord. @rudbull1226 or Futzies.

List your project tools and why you need them.

For my Week 12 project, I chose tools that will help me with programming, game development, and keeping my work organized.

Visual Studio: I will use Visual Studio to write, edit, test, and debug my C# code.

Unity: I will use Unity to work on my game development project, create game objects, and test how everything works together.

GitHub: I will use GitHub to store my project, track my progress, and make sure my professor can access my work.

Git: I will use Git to commit my changes and keep track of different versions of my project.

C#: I will use C# as my programming language because it works with Unity and helps me control how objects behave in my game.

Required: name the AI you will use, its project task and how you will verify its output. Use course-provided/shared or approved local access if needed; no personal or paid AI account is required.

AI: ChatGPT

Task: Fix errors that are in my code.

Verification: I will put screenshots, as well as inform on the Readme.
